

Figure 1. A schematic diagram illustrating the experimental design. The figure shows two parallel horizontal timelines. The top timeline is labeled "Participant's Time" and includes three segments: "Pre-Test", "Training", and "Post-Test". The bottom timeline is labeled "Time" and includes four segments: "Pre-Test", "Training", "Transfer", and "Post-Test". Arrows indicate the flow of time from left to right. Vertical dashed lines connect corresponding points on both timelines, showing that the Pre-Test and Post-Test occur at the same times relative to the overall experiment duration, while the Training phase occurs between the Pre-Test and Post-Test in both participant and time frames.
